SANAD

Students
Supporting Students

CULP

CULP helps students during practical activities using mobile phones and QR code. It allows students to get quick help from other students when they have a problem.

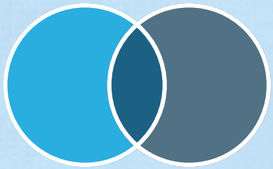

Advantages

1- Low cost: It only needs a mobile phone and a QR code.
2- Quick help: Students can find nearby students who can help them.
3- Faster learning: Students completed the task 30% faster.

Disadvantages

1- The SOS and ASOS interfaces are not easy to use.
2- It depends on a good internet connection.
3- It is limited to one practical activity.

CULP

Similarities with our project:

1- Both systems use peer-to-peer help.

2- Both have help requests and request acceptance.

3- Both depend on students' knowledge and skills.

Differences from our project:

Type of help:

1- CULP provides immediate help during one practical activity.

2- Sanad provides help for different subjects and skills.

Helper selection:

1- CULP chooses helpers based on location and experience.

2- Sanad chooses helpers based on their skills.

Communication:

1- CULP provides help immediately.

2- Sanad uses scheduled sessions.

MODARBY

مدربي Modarby

Modarby is an Arabic platform that helps students study, solve homework, and prepare for exams. It also allows students to communicate directly with teachers and book private lessons

Advantages

1-Students can easily communicate with teachers
2-It helps students with different subjects and exam preparation

Disadvantages

1-Private lessons.
2-It focuses on teachers instead of students helping each other.

MODARBY

مدربي Modarby

Similarities with our project:

1- Students choose the subjects they need help with.
2- There is direct communication between students and the people providing help.

Differences from our project:

The main difference is that Modarby relies on private tutors whereas our project is based on the idea of students helping other students

CODEMENTOR

The Codementor platform is dedicated to solving students' technical problems instead of relying on traditional solutions, such as searching on Google

Advantages

1. Instant / real-time assistance.
2. An integrated interactive environment built into the site, featuring a collaborative code editor, screen sharing, and video calling.
3. Ability to rate and review the mentor.

Disadvantages

1. High cost per session, which can increase as session duration extends.
2. Limited exclusively to technical issues.

CODEMENTOR

Similarities with our project:	Differences from our project:
1. Ability to add skills to profiles. 2. Ability to submit help requests. 3. Ability to schedule session appointments. 4. Ability to rate and review the mentor.	**Type of help:** 1. Sanad: Targeted at all students across all majors within Taibah University. 2. Codementor: Targeted globally at developers, engineers, and tech students. **Fees:** 1. Sanad: Completely free of charge. 2. Codementor: Paid service. **Communication:** 1. Sanad: Direct/private messaging to a specific expert for assistance is not available. 2. Codementor: Direct/private messaging to a specific expert to request help is supported.
