SANAD

Students Supporting Students

Project Definition

SANAD is a peer-support platform that connects university students who need academic assistance with students who can provide help in a specific subject or skill.

Objectives

- **Connect: Connect students who need academic help with students who can provide it.**
- **Support: Make it easier for students to request and provide academic help.**
- **Organize: Allow students to arrange suitable sessions for academic support.**

Scope

The project focuses on peer-to-peer academic support among university students. It covers requesting and offering help in academic subjects and technical skills, arranging support sessions, and providing basic feedback. The platform does not include paid tutoring, professional instructors, or completing academic work on behalf of students.

SANAD Requirements

1. Functional Requirements

1.1 Skills

- **Add: Helpers list what they know, such as Java.**
- **Find: Students search for helpers by skill.**

1.2 Requests

- **Post: Students ask for help with a specific topic and time.**
- **Accept: Helpers accept the request.**
- **Status: The request follows the process:**
  Open → Accepted → Done

1.3 Communication

Both parties shall agree upon the session time and meeting method.

1.4 Rescheduling

Appointments may be cancelled or rescheduled up to a specified period prior to the start time.

SANAD Requirements

2. Non-Functional Requirements

2.1 Usability

The system should be easy to use and remember.

2.2 Privacy

The system shall protect users' personal information by allowing users to control who can access it.

Literature Review

10. CULP

CULP is a system that supports students during practical activities by using mobile phones and QR codes. It allows students to receive quick assistance from other students when they encounter a problem during an activity.

Advantages

1. **Low Cost: The system only requires a mobile phone and a QR code.**
2. **Quick Help: Students can find nearby students who are able to provide assistance.**
3. **Faster Learning: Students were able to complete the task 30% faster.**

Disadvantages

1. **The SOS and ASOS interfaces are not easy to use.**
2. **The system depends on a good Internet connection.**
3. **It is limited to a single practical activity.**

Similarities with SANAD

1. **Both systems use a peer-to-peer help approach.**
2. **Both systems include help requests and request acceptance.**
3. **Both systems depend on students' knowledge and skills to provide assistance.**

Differences from SANAD

Type of Help:

1. **CULP provides immediate assistance during a specific practical activity.**
2. **SANAD provides academic help for different subjects and skills.**

Helper Selection:

1. **CULP selects helpers based on their location and experience.**
2. **SANAD selects helpers based on their skills.**

Communication:

1. **CULP focuses on providing immediate assistance.**
2. **SANAD allows students to schedule help sessions.**

11. MODARBY

Modarby is an Arabic educational platform that helps students study, solve homework, and prepare for exams. It also allows students to communicate directly with teachers and book private lessons.

Advantages

1. **Students can easily communicate with teachers.**
2. **It supports students in different subjects and helps them prepare for exams.**

Disadvantages

1. **The platform focuses on private lessons.**
2. **It mainly relies on teachers rather than students helping one another.**

Similarities with SANAD

1. **Students can choose the subjects in which they need help.**
2. **The platform provides direct communication between students and the people providing assistance.**

Differences from SANAD

The main difference is the type of assistance provided. Modarby relies on private tutors, whereas SANAD is based on peer-to-peer assistance, where students help other students by sharing their knowledge and skills.

12. CODEMENTOR

Codementor is a platform designed to help users solve technical problems instead of relying on traditional methods such as searching for solutions on Google. It provides an interactive environment where users can receive assistance from experienced mentors.

Advantages

1. **Instant and Real-Time Assistance: Users can receive immediate help with their technical problems.**
2. **Interactive Environment: The platform provides collaborative tools such as a code editor, screen sharing, and video calling.**
3. **Rating and Review System: Users can rate and review their mentors after receiving assistance.**

Disadvantages

1. **The cost per session is high and may increase depending on the session duration.**
2. **The platform is mainly focused on technical issues.**

Similarities with SANAD

1. **Users can add skills to their profiles.**
2. **Users can submit help requests.**
3. **Users can schedule session appointments.**
4. **Users can rate and review the person providing assistance.**

Differences from SANAD

Target Users:

1. **SANAD targets students across different majors at Taibah University.**
2. **Codementor is a global platform mainly targeting developers, engineers, and technology students.**

Fees:

1. **SANAD is completely free of charge.**
2. **Codementor is a paid service.**

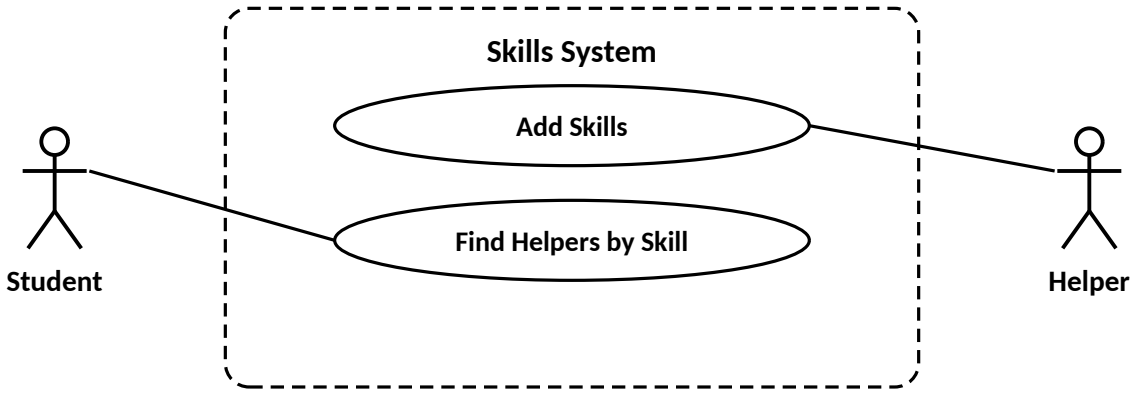

Communication:

1. **SANAD does not provide direct/private messaging with a specific expert to request assistance.**
2. **Codementor supports direct/private communication with a specific mentor when requesting help.**

SANAD Requirements

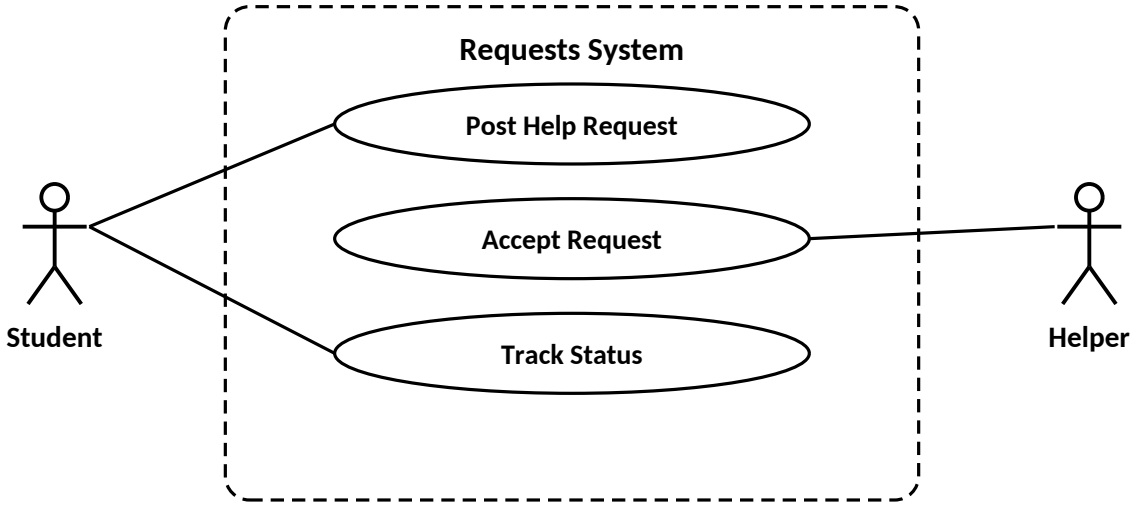

3.1 Skills

Add: Helpers list what they know, such as Java.
Find: Students search for helpers by skill.

3.2 Requests

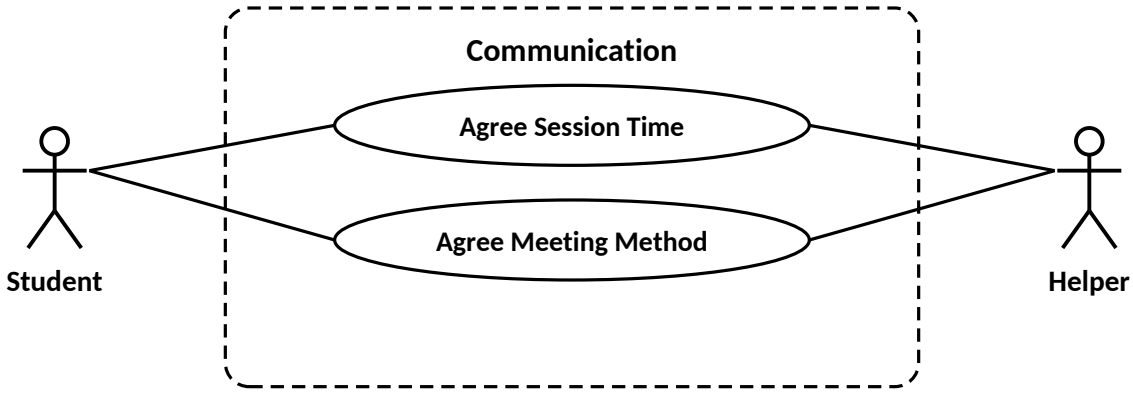

Post: Students ask for help with a topic and time.
Accept: Helpers accept requests.
Status: Open -> Accepted -> Done.

SANAD Requirements

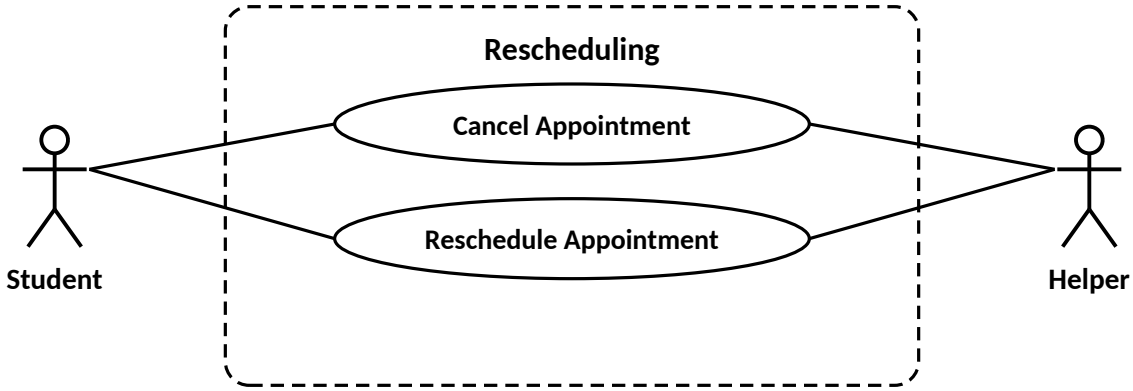

3.3 Communication

Student and Helper agree on the session time and meeting method.
The system saves the agreed session details.

3.4 Rescheduling

Student or Helper may cancel or reschedule an appointment.
Changes are allowed only before the cutoff period.

SANAD - Overall Use Case Diagram

The diagram summarizes the four main functional areas of SANAD.
